

Symantec™ DeepSight™ Threat Management System

Provides actionable security intelligence covering the entire threat lifecycle with an industry-leading early warning system

Overview

Symantec™ DeepSight™ Threat Management System provides actionable intelligence covering the complete threat lifecycle, from initial vulnerability to active attack. A new set-up wizard enables users to receive actionable information and useful alerts within minutes of configuration. With personalized notification triggers and expert analysis, the system enables enterprises to prioritize IT resources in order to better protect critical information assets against a potential attack. As the first early warning service to deliver spyware and adware alert and warning information, Symantec also helps organizations mitigate and remove these security risks.

Key Benefits

- Detailed notifications provide timely intelligence on vulnerabilities, threats, and security risks aggregated from thousands of exclusive sources and attack sensors worldwide
 - Enables efficient prioritization, allocation, and deployment of security staff and resources by providing detailed threat mitigation strategies and customizable delivery options
 - Allows users to configure automated notifications based on the requirements of their unique IT infrastructure
-
- **NEW!** Includes vulnerability alerts on more than 35,000 product versions from over 4,200 vendors, to provide actionable intelligence covering the complete threat lifecycle, from initial vulnerability to active attack
 - **NEW!** First early warning service to deliver alert and warning information on spyware and adware including risk ratings, detailed technical description about code behavior, and mitigation and removal instructions
 - **NEW!** Domain Threat alerts notify users when a specified domain is named in a malicious code payload
 - **NEW!** Set-up wizard automates and streamlines configuration process, enabling users to receive actionable information and useful alerts within minutes
 - Custom reports option provides powerful data mining, tracking, and reporting capabilities – including customization for specific source IP addresses or target ports – for resource optimization
 - Powered by the Symantec Global Intelligence Network, a comprehensive collection of vendor-neutral security data sources, active global attack data, and expert research and analysis that provide an unmatched view of global threat activity

System Requirements.

Browsers:

- Microsoft Internet Explorer versions 5.5+
- Mozilla 1.7.x+ / Firefox 1.x+

With the following browser features enabled:

- Cookies
- JavaScript
- SSL

Additional Software:

- Adobe Acrobat 5.0 or greater for viewing alerts and reports
- Internet email address for receiving alerts and reports

Optional:

- * Telephone number for receiving voice alerts
- * SMS enabled phone for receiving SMS alerts
