

Title: Defect Report on REVERSED QUESTION MARK in FPDAM 18
Status: Defect Report
Source: US National Body and Unicode Consortium
Action: For action by WG2
Distribution: Members of SC2/WG2

The character REVERSED QUESTION MARK was added to FPDAM ¹⁸~~22~~ to serve as a visual representation for the SUBSTITUTE control function.

Coding it in the General Punctuation block (code position 2047) opens the serious possibility of confusing it with the ARABIC QUESTION MARK, a punctuation character coded at 061F and shown as a reversed question mark.

This could be fixed by changing the character name to SYMBOL FOR SUBSTITUTE FORM TWO and encoding it at 2426 (after SYMBOL FOR DELETE FORM TWO)
